

Reward Coupon Marketplace - Project Blueprint

Comprehensive summary of the business idea, platform flow, revenue model, architecture, features, database design, APIs, security, and implementation roadmap.

Project Overview

A secure marketplace where users can buy and sell unused coupons, vouchers, promo codes, cashback offers, gift cards, and loyalty rewards. Sellers monetize unused rewards while buyers purchase discounts. The platform acts as a trusted escrow intermediary and earns commission from transactions.

Core Features

Seller KYC, Coupon Listing, Coupon Encryption, Buyer Search & Filters, Secure Checkout, Escrow Payments, Coupon Reveal After Payment, Seller Payouts, Dispute Resolution, Reviews & Ratings, Notifications, Admin Dashboard, Analytics.

Revenue Model

Platform earns through transaction commissions, featured listings, premium seller subscriptions, advertising, affiliate partnerships, and convenience fees.

Technology Stack

Frontend: React.js/Next.js. Backend: Node.js + Express. Database: MongoDB/PostgreSQL. Payments: Razorpay/Stripe. Storage: AWS S3. Realtime: Socket.io. Cache/Jobs: Redis + BullMQ.

Database Collections

Users, Coupons, Orders, Payouts, Disputes, Wallet Transactions, Notifications, Audit Logs.

Platform Flow

Seller registers → KYC → Uploads coupon → Admin approval → Buyer purchases → Payment held in escrow → Coupon revealed → Buyer confirms validity → Seller payout released → Platform earns commission.

Security

Coupon encryption, JWT authentication, role-based access, KYC verification, audit logs, rate limiting, payment verification, fraud prevention, and dispute management.

MVP Roadmap

Authentication → Roles → Coupon Upload → Admin Approval → Search & Filters → Payment Gateway → Coupon Reveal → Escrow → Seller Payout → Dispute System → Analytics Dashboard.

Future Enhancements

AI fraud detection, automated coupon validation, affiliate integrations, mobile applications, enterprise coupon trading, and brand partnerships.
